HEMAKSHI PANDEY

(206)-468-2474 developer8hema@gmail.com linkedin.com/in/pandey8engineer github.com/hpandey7-ASU-1233327682

EDUCATION

Master of Science in Software Engineering Arizona State University, United States **May 2026** | **GPA: 4.00 / 4.00, Distinction**
Relevant Coursework: Cloud Computing, Natural Language Processing, Web Application Programming.

Bachelor of Technology in Computer Science Guru Gobind Singh Indraprastha University, India **Jun. 2021** | **GPA: 3.98 / 4.00**
Relevant Coursework: Computer Networks, Operating Systems, Database Management, Data Structures, Machine Learning, AI

TECHNICAL SKILLS

Programming Languages: Swift, Java, Kotlin, C#, Python, C++, TypeScript, JavaScript
Mobile & Frameworks: SwiftUI, CoreData, Jetpack Compose, Android SDK, MVVM, Swift Concurrency, Kotlin Coroutines
Backend & Frameworks: Spring Boot, .NET, RESTful APIs, Distributed Systems, Microservices
Cloud/DevOps & Databases (SQL, NoSQL): AWS, Docker, Kubernetes, CI/CD, MS SQL Server, MongoDB, Redis
AI / ML: LLMs, RAG, Prompt Engineering, AI Agents, Tool Calling, MCP, PyTorch, AI-assisted Development (Claude Code)

EXPERIENCE

Software Engineer | **MapmyIndia** **Apr. 2023 – Apr. 2024**

- Reduced **API-to-UI latency by 35%** for real-time vehicle and trip updates Locate Driver iOS apps by optimizing **Swift** data flows, REST API integration, and state management with **MVVM and Repository patterns**.
- Enabled drivers to complete **end-to-end trip workflows** by building **Swift/SwiftUI** features for trip assignments, consignment management, and route tracking, integrated with **REST APIs**.
- Shipped **12+ production features** for real-time vehicle tracking and fleet management in the **Locate Android app** by building **Kotlin/Jetpack Compose** components, integrating **REST endpoints**, and applying **MVVM** with the **Repository pattern**.
- Delivered **30+ backend microservices and REST APIs** using **C#/.NET**, enabling reliable processing of **geospatial records of 150,000+ vehicles daily** across a distributed transportation platform.
- Improved database performance across **SQL Server** by refactoring stored procedures and optimizing indexing strategies, accelerating fleet-analytics reporting by **65%**.
- Triaged and resolved production incidents across backend services, APIs, and data pipelines supporting **150,000+ vehicles**, conducting root-cause analysis that reduced recurring failures by **45%**.

PROJECTS

Taskful, Daily Planner | ***Swift, SwiftUI*** | **[Code]** **Apr. 2026 – May 2026**

- Engineered a native **iOS** daily planner in SwiftUI with 3 tabs (Today, Upcoming, Search), offline storage, and search across 4 filters, measured by every task action surviving app restarts, by modeling tasks and many-to-many tags in SwiftData and filtering with Predicate queries inside the database.
- Automated task reminders with 6 lead-time options, measured by on-time notifications that were rescheduled on edit and cancelled on completion or delete, by scheduling calendar-triggered requests with UserNotifications and validating the logic with 39 unit tests in Swift Testing.

Shoply | ***Kotlin, Jetpack Compose*** | **[Code]** **Dec. 2025 – Jan. 2026**

- Built a full shopping flow (search, category filters, sorting, wishlist, cart, checkout and order tracking) across a catalog of 190+ products, by architecting a **Kotlin** and **Jetpack Compose MVVM** app on a Retrofit REST client, with cart, wishlist and orders persisted locally in Room.
- Ensured accurate order totals and atomic order placement, verified by 17 passing unit tests, by modeling all money as integer cents, and placing each order in a single Room transaction.

Personalized Learning Platform | ***Arizona State University Capstone*** | **[Poster]** **Jan. 2026 – May 2026**

- Led a **6-member Agile team** across **6 sprints** to build an **AI-powered personalized learning platform**, delivering assessment, tutor-chat, and adaptive learning-path workflows using **Django REST Framework, React, MySQL, and Docker**.
- Designed the platform's adaptive learning workflow, transforming diagnostic assessment results into personalized course plans and integrating formative assessments with targeted feedback and remediation.

Elastic Face Recognition Application | ***AWS EC2, S3, SQS (Academic Project)*** **Oct. 2025 – Nov. 2025**

- Designed and deployed a multi-tier cloud application using **AWS EC2**, **S3** object storage, and **SQS** message queues, decoupling web and application tiers and implementing a custom autoscaling controller (up to **15 instances**) based on queue depth.
